Subject: RE: February 26, 2019 call with NOLA

After talking to the bosses here, it looks like we all want to do the response. So, we are proceeding with an assessment that should be followed shortly with a removal action.

It appears, with just a limited amount to go by, that the NOLA contractor did a pretty good job of characterizing and finding the contamination. I need to get that verified and look for data gaps. I'd like to get you and Montgomery to get a look at the data and determine if its enough to go with to determine where we need to dig. Or prepare a sampling plan to do additional investigation. And we will have START involved, as soon as the contracting paperwork goes through. If you could check with Sam about availability, I would appreciate it. If nothing else, find good time for us to talk about it.

I can imagine doing some surveying. Like with the baby-buggy rigs. Making sure that the sampling done so far is representative. I don't know if NOLA went into yards, or past the small area of concern. And all the other good stuff they do.

BTW: The site is now available for People Plus A6SK action codes **RS** and RV,
